Track you cycle naturally and discover when you are ready to conceive

breathe ilo determines fertile days by measuring a woman's breathing in only 1 minute.

The main measured parameter is the pCO₂ in the breath.

This allows the identification of a woman's fertile days in a fast and easy way.

- ✓ breathe into the device for 1 minute a day
- ✓ get fertile days displayed in the app
- ✓ record symptoms in the cycle calendar and get to know your body better

simple, fast, hormone free,
hygienic, daytime independent
